

# Finding Resident Rooms- A Guide for New Residents

Welcome! We're really glad you are finally here, congrats on making it this far and finding the House. Below are instructions to finding residents rooms. We're doing our best provide you and easy semi-contactless check in process which means you're about to find your way around the House.

ISH-DC is a really unique building and you might need some help finding where your room is. My best advice is keep walking because everything is connected and you will eventually find your way!

But after a long flight all you want to do is find your room and get some rest so here's some help to find the room:

## Finding rooms 35-58 in Marpat

### Step 1

From the lobby walk past the two black framed glass doors. This is what you should see:

### Step 2

Walk through the door directly in front of you (this door is usually propped open).

### Step 3

Follow the hallway. You will pass bathrooms, make a right turn, and walk through two fire doors (sometimes these are propped open, other times they are closed).

You should see a refrigerator on the same level you are on and to your right another refrigerator slightly higher up, on the top of a small staircase (only 3 or 4 steps/stairs).

### Step 4

Walk up the steps and you should see our signage about washing your hands:

### Step 5

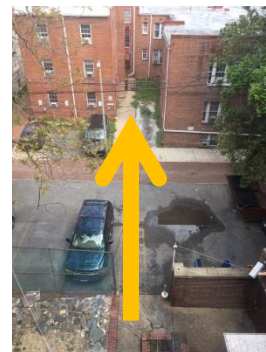

If you open the door next to the hand washing signs, you will be in the Van Slyck stairwell (it is very red).

**Walk down one set of steps and you should see a glass door to the parking lot. Here's a birds eye view:**

### Step 6

Exit the building and walk up a few concrete steps. Continue straight light, see yellow arrow below. Walk up another few concrete steps, you should be at the "main" door of Marpat.

Marpat is a **really** unique building, each door is labeled in a way for you to know which rooms are down what hallways.

For quick reference rooms 36-42 are on the first floor, rooms 43-50 are on the second floor, and 51-58 are on the third floor.

Once you arrive at the door labeled with your assigned room number, enter the room combination (provided inside the key envelope) and turn the knob toward the arrow. Here's a photo:
